

Topic: 5G energize, the comprehensive transformation of the digital industry

With the coming of the 5G era, the direct output and indirect output driven by 5G technology will reach 6.3 trillion and 10.6 trillion RMB respectively by 2030. The arrival of the 5G era has also brought many opportunities for the digital transformation of enterprises. With the development of the digital economy, more and more enterprises have identified digital transformation as the strategic for their own development. At the same time, how to achieve digital transformation and change the future of traditional enterprises is the most important focus.
